About Us

Savannah Environmental was established in 2006 with a clear objective to provide services to the infrastructure development sector, with environmental advisory expertise from development through to operations. The company has achieved this objective and is a leading provider of integrated environmental and social consulting, advisory and management services. We have the practical expertise and capacity to provide environmental management services at all stages of project development

We are wholly woman-owned, with a 51% black woman shareholding. Our dynamic team of consultants incorporates multi-disciplinary skills providing a range of environmental management services. We have a proven track record of successfully consulting on developments in all nine Provinces of South Africa, as well as in neighbouring southern African countries.

Our Approach to Consulting Services

As an independent environmental assessment consultancy, we are able to competently provide environmental consulting services in accordance with the requirements of the environmental legislation. The company has a core team of consultants who, through their diverse skills, experience and exposure to various projects, have an ability to successfully tackle multidisciplinary projects.

Where specific expertise is not available within our skills base, we are able to bring on board specialist consultants with appropriate skills while maintaining overall responsibility for the project. A developed network with leading experts in other environmental-related disciplines strengthens this consulting team, depending on the client's needs and the nature of the service required, enabling the provision of a quality service.

In order to enable the decision-making authorities to make informed decisions, the project management team ensure the compilation of world-class reports. Through previous involvement as part of large projects, projects funded by funding agencies as well as public-private partnerships, the team understands the requirements which must be met to provide bankable reporting.

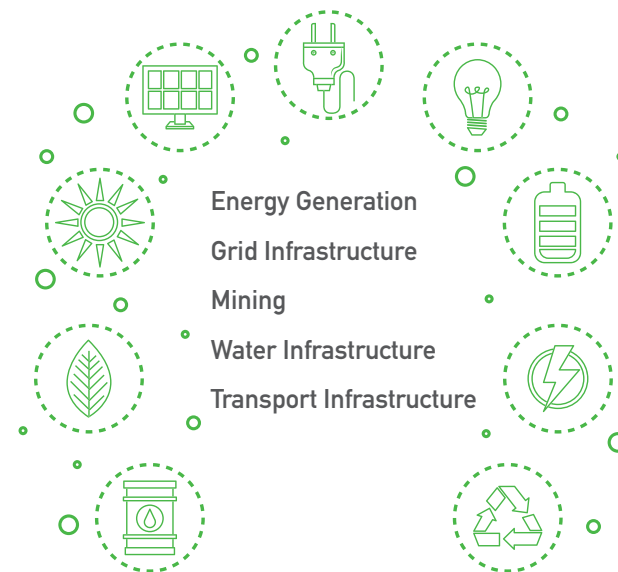

Our Experience

As an independent environmental assessment consultancy, we are able to competently provide environmental consulting services in accordance with the requirements of the environmental legislation. The company has a core team of consultants who, through their diverse skills, experience and exposure to various projects, have an ability to successfully tackle multidisciplinary projects.

Where specific expertise is not available within our skills base, we are able to bring on board specialist consultants with appropriate skills while maintaining overall responsibility for the project. A developed network with leading experts in other environmental-related disciplines strengthens this consulting team, depending on the client's needs and the nature of the service required, enabling the provision of a quality service.

In order to enable the decision-making authorities to make informed decisions, the project management team ensure the compilation of world-class reports. Through previous involvement as part of large projects, projects funded by funding agencies as well as public-private partnerships, the team understands the requirements which must be met to provide bankable reporting.

We have experience in a variety of infrastructure projects, including Energy Generation, Grid Infrastructure, Mining, Water Infrastructure and Transport Infrastructure.

Professional Memberships and **Awards**

Our senior consultants are registered with the South African Council for Natural Scientific Professions (SACNSAP). We contribute strategic advice to industry bodies through our memberships to the South African Photovoltaic Industry Association (SAPVIA), South African Wind Energy Association (SAWEA), International Association for Impact Assessment South Africa (IAIAsa) and the Water Institute of Southern Africa (WISA).

We are proud to have been awarded the Leading Environmental Consultant on Wind Projects by the SAWEA in both 2013 and 2015.

Our Services and Expertise

We are well placed to provide a range of environmental services at all stages of the project life-cycle. Our broad range of services provides developers with the opportunity to obtain consulting services from one company for all stages of project development, thereby enabling a seamless continuity in the project development process. Services are continuously developed and new services offered as the client and industry requirements evolve. Our services include:
